Why a Noorlander organ?

An organ should arouse your senses. The sound is very important but so is the organ console itself. Noorlander Organs leads in this field. Our organs have a very realistic (pipe) organ sound, thanks to extremely advanced Sweeling technology developed by Noorlander Organs.

For optimal use of Sweeling we have developed special hardware and software.

Our organs have a fantastic sound reproduction system aided by a Noorlander Organ Manager. This software automatically regulates the power, audio and midi.

The finishing touches can be done to match your other furniture. All operating controls are carefully disguised in the organ console.

We can offer you personalized advice and a premium guarantee. Do you need help? Through internet we can offer you the help you need.

About Sweeling

Technology

Sweeling is the technology we have developed to play virtual pipe organs. The biggest advantages of Sweeling are the infinitely adjustable reverberation, the super-fast loading time, the simplicity of operation, the very realistic wind model and the great sound realism. The organs are recorded pipe by pipe. Details such as the keyboard and stop action are also included. The sound collection of the recordings of these pipes is called a **sample set**.

Organs

Famous organs have since been recorded for Sweeling, such as the organs of the Grote Kerk in Dordrecht (NL). The sound fidelity can best be compared to a true-to-life CD recording. Sweeling and its technique appeal to the imagination, the possibilities are almost limitless! Furthermore, numerous sample sets that are already on the market are suitable for playing in Sweeling.

Menuett III

The perfect combination!
50 wooden draw stops innovatively combined with retractable touch screens.

Classic version with wood carving ▲

The organ console has a compact design. Changing from one sample set to another or activating other functions is easy with the retractable touch screens.

Do you prefer wooden draw stops? No problem! The attractive draw stops have name plates which can be made in a design to your liking.

The virtual pipe organ for every living space

High end speakers pointing upwards offer a full and roomy organ sound. It is also possible to place extra speakers in the front of the optional top. All of this makes the Menuett III the ideal organ for every living space!

This organ is unique for a variety of reasons:

- Compact positive organ model
- Up to 58 draw stops
- Possibilities include a luxury version with authentic details
- Pipe front or alternative top are possible
- Tall and low versions
- Headphone connection
- Your choice of finish and colour

With raised top and 58 draw stops ▲
