Truly functional...

noorlanderorgans.com

Why a Praeludium?

Ease and functionality go hand in hand with this movable and compact organ. The possibilities are almost endless. All components are easy to disassemble, therefore placing them in small rooms is no problem.

This organ gives you the feeling of playing a grand cathedral organ, and yet it is compact.

You can choose from a wide variety of speakers. Speakers will be placed outside the organ. The ergonomics and the outstanding sound make the organ a pleasure to play.

Custom-made Praeludium V ▲

About Sweelinq

Technology

Sweelinq is the technology we have developed to play virtual pipe organs. The biggest advantages of Sweelinq are the infinitely adjustable reverberation, the super-fast loading time, the simplicity of operation, the very realistic wind model and the great sound realism. The organs are recorded pipe by pipe. Details such as the keyboard and stop action are also included. The sound collection of the recordings of these pipes is called a **sample set**.

Organs

Famous organs have since been recorded for Sweelinq, such as the organs of the Grote Kerk in Dordrecht (NL). The sound fidelity can best be compared to a true-to-life CD recording. Sweelinq and its technique appeal to the imagination, the possibilities are almost limitless! Furthermore, numerous sample sets that are already on the market are suitable for playing in Sweelinq.

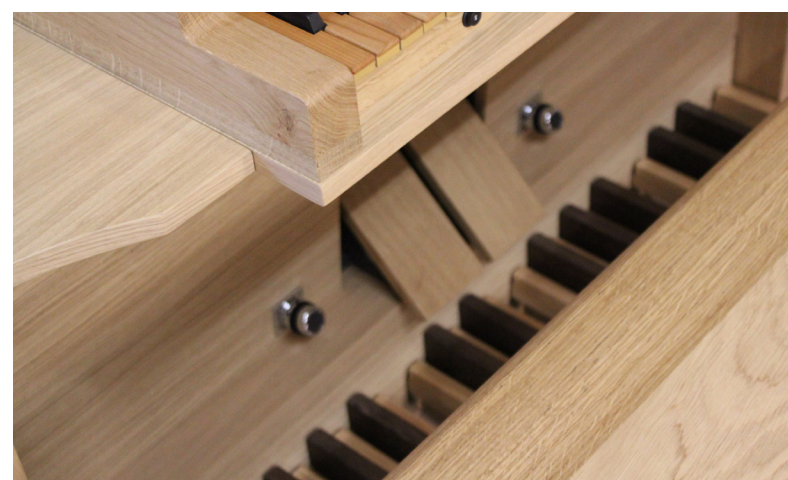

Praeludium

Sound

- High-end audio configuration possible
- A significantly better sample quality than other electronic organs
- The sound of the organ enhances your playing pleasure

Usage

- You can create your own combination sets (setzer), with your touchscreen or thumbpistons
- The organ furniture is ergonomically designed
- An outstanding instrument for long study sessions

Praeludium: “Truly functional”

Praeludium III with 32-tone pedal and foot pistons ▲
