Sonnette III

Why a Noorlander organ?

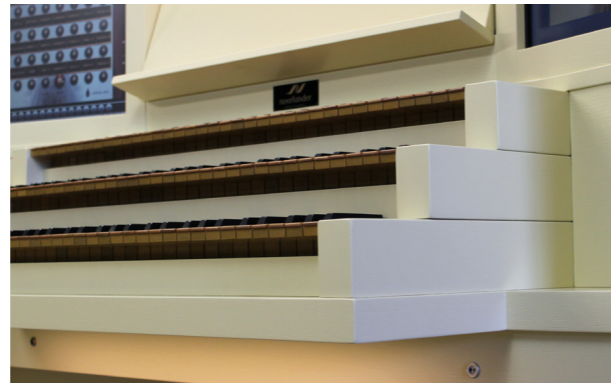

An organ should arouse your senses. The sound is very important but so is the organ console itself.

Noorlander Organs is a leader in this field. Our organs have a very realistic (pipe) organ sound, thanks to extremely advanced Sweeling technology developed by Noorlander Organs.

For optimal use of Sweeling we have developed special soft- and hardware. Our organs have a fantastic sound reproduction system and feature a standard Noorlander Organ Manager. This software automatically regulates the power, audio and midi.

The finishing can be made to match your other furniture. All operating controls are virtually invisible in the organ console.

We can offer you tailor-made advice and excellent guarantee. Do you need help? Through internet we can offer you the help you need.

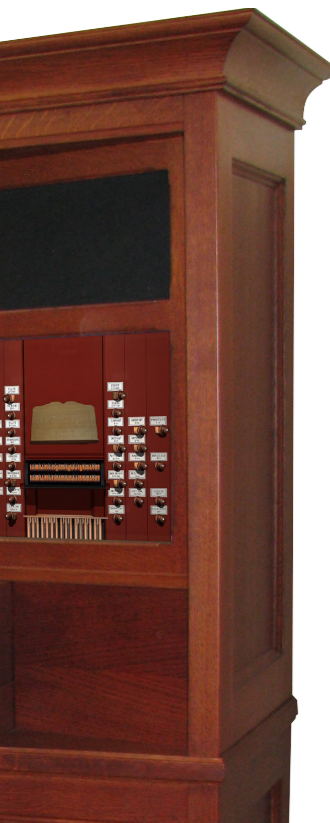

▲ Standard with 3 manuals

▲ Optional speakers in the top

▼ Option: classic model

About Sweeling

Technology

Sweeling is the technology we have developed to play virtual pipe organs. The biggest advantages of Sweeling are the infinitely adjustable reverberation, the super-fast loading time, the simplicity of operation, the very realistic wind model and the great sound realism. The organs are recorded pipe by pipe. Details such as the keyboard and stop action are also included. The sound collection of the recordings of these pipes is called a **sample set**.

Organs

Famous organs have since been recorded for Sweeling, such as the organs of the Grote Kerk in Dordrecht (NL). The sound fidelity can best be compared to a true-to-life CD recording. Sweeling and its technique appeal to the imagination, the possibilities are almost limitless! Furthermore, numerous sample sets that are already on the market are suitable for playing in Sweeling.

Sonnette III

**For the exacting organist.
A modern design and ultimate
functionality go hand in hand.**

Simple lines and a tranquil design make this organ suitable for every living space. The slanted touch screens immediately show the chosen registration.

The design allows for speakers pointing upwards as well as forwards at ear level.

**Always wanted to play famous
pipe organs?
It is now possible, every day!**

With the Noorlander Organ Manager it is possible to select the directness of the sound. For the enthusiastic organist, this organ offers limitless possibilities while still being easy to manage.

This organ is unique for a variety of reasons:

- High end multiple channel audio system
- Ultimate listening experience due to perfectly placed speakers
- Service through internet
- PC with 16 GB RAM and 250 GB SSD
- Headphone connection
- 2 ergonomically placed 17" touch screens
- Adjustable bench height
- 2 wooden swell pedals
- Your choice of finish and colour
