Why a Noorlander organ?

An organ should arouse your senses. The sound is very important but so is the organ console itself. NoorlanderOrgans is a leader in this field. Our organs have a very realistic (pipe) organ sound, thanks to extremely advanced Sweeling technology developed by Noorlander Organs.

For optimal use of Sweeling we have developed special soft- and hardware. Our organs have a fantastic sound reproduction system and feature a standard Noorlander Organ Manager. This software automatically regulates the power, audio and midi.

The finishing can be made to match your other furniture. All operating controls are virtually invisible in the organ console.

We can offer you tailor-made advice and excellent guarantee. Do you need help? Through internet we can offer you the help you need.

▲ Authentically crafted draw stops

▲ Optional wood carving

▼ Available with 4 manuals

About Sweeling

Technology

Sweeling is the technology we have developed to play virtual pipe organs. The biggest advantages of Sweeling are the infinitely adjustable reverberation, the super-fast loading time, the simplicity of operation, the very realistic wind model and the great sound realism. The organs are recorded pipe by pipe. Details such as the keyboard and stop action are also included. The sound collection of the recordings of these pipes is called a **sample set**.

Organs

Famous organs have since been recorded for Sweeling, such as the organs of the Grote Kerk in Dordrecht (NL). The sound fidelity can best be compared to a true-to-life CD recording. Sweeling and its technique appeal to the imagination, the possibilities are almost limitless! Furthermore, numerous sample sets that are already on the market are suitable for playing in Sweeling.

Vallotti III

This custom model will cause an organists heart to beat faster! This design emulates the console of a historical pipe organ.

The solid console has eloquent panelling. The careful placing of the manuals, music rack and authentic draw stops provides the feel of a centuries old pipe organ.

Always wanted to play famous pipe organs? Now you can, every day!

Behind the foldable music rack is a 17 inch touch screen. The stop names are grafted into exchangeable frames. The frames are double sided, easy to use and can be stored above the music rack. The Vallotti is the dream of every organist!

This organ is unique for a variety of reasons:

- Available with 4 manuals
- Luxurious craftsmanship
- Authentic pipe organ look
- 64 wooden draw stops, optionally 80 or 96
- Foldable music rack for access to 17" touch screen
- Headphone connection
- Exchangeable draw stop name plates
- Your choice of finish and colour
- Dividable console
- Abundant storage space
